Knowledger AI.

Unify your project team's knowledge and save hours worth of tabbing, scrolling, and linking.

Goal: deliver a more high quality product faster without wasting brainpower on the housekeeping
When we've talked to people in the past, we've heard…

"How do I keep track of all of my information? **It's spread across too many different places.**"

"Forgot to update my team on the progress I made because **I have to update things across so many different softwares and shared platforms.** This is going to slow down our deliverable."

"I feel like I'm **constantly forgetting something I've thought about in the past** that would really help this project right now."

Options people generally consider at this stage

1

Force-fit everything onto one app

Good for personal knowledge management, but what about the team?

Teams don't work exclusively on one app.

2

Build a "personal knowledge stack"

A systematic way to ensure you grab all relevant info at the cost of time & $$$

(TENS of hours and HUNDREDS of $$$ a month on good middleman tools)
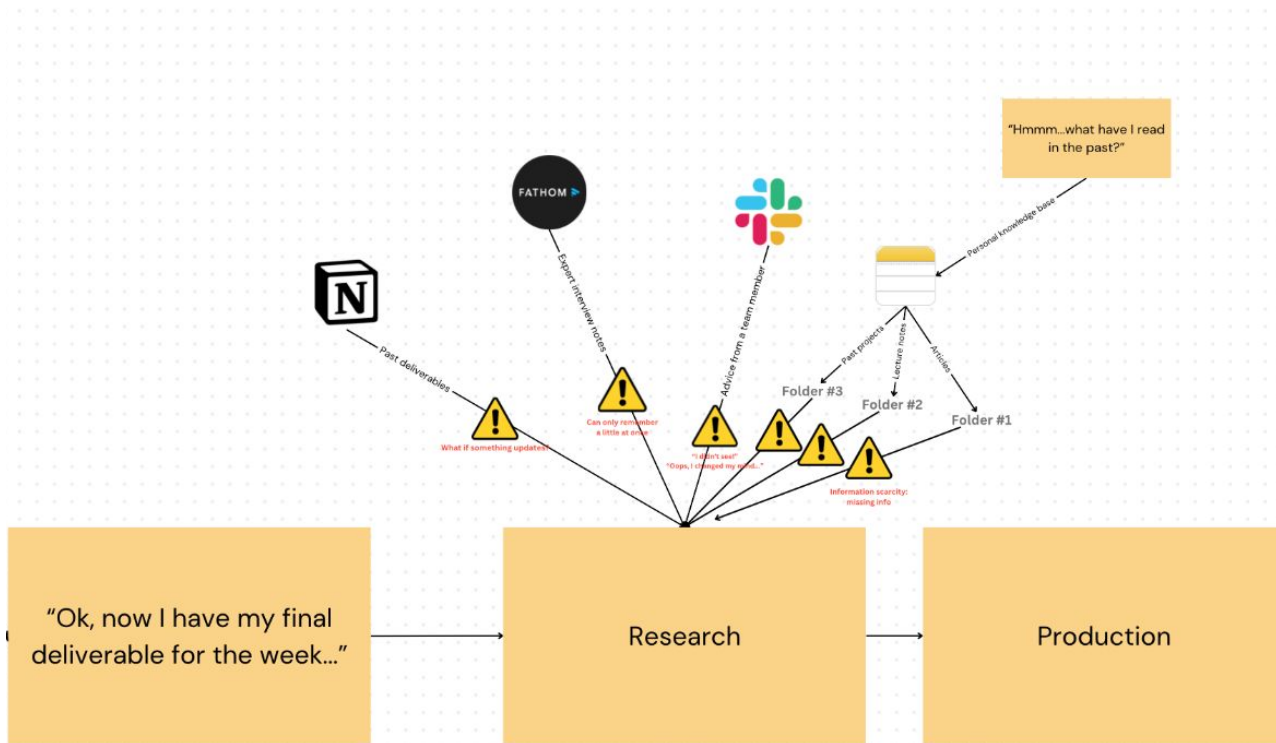

3

Create a unified integrated interface

Good if you don't want to migrate to new tools, just need an easier way to keep track of existing tools
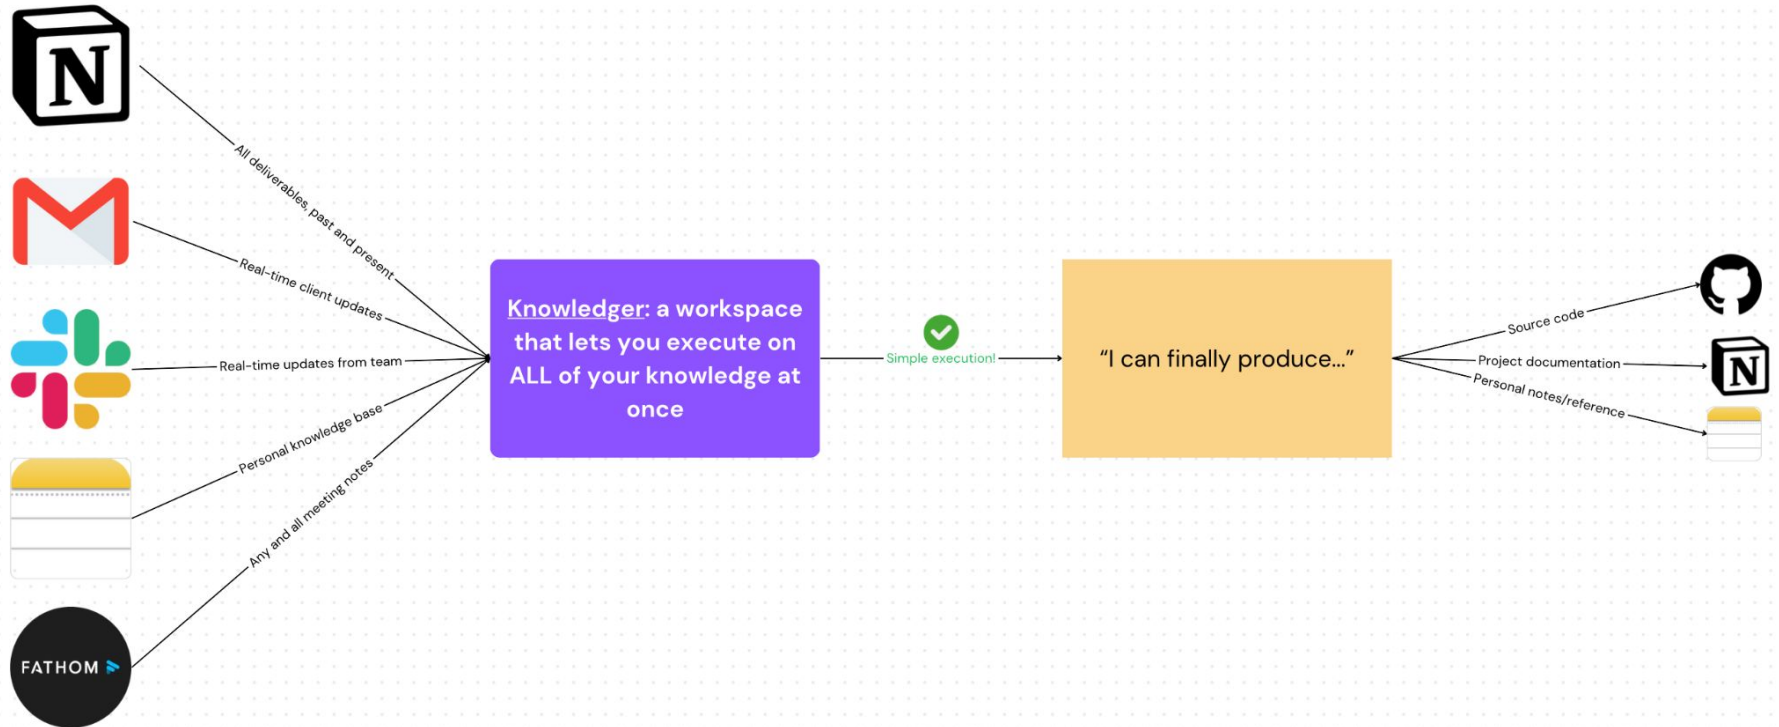

Before Knowledger: pro bono software nonprofit team
Constant back-and-forth to update info and tasks across apps

# With Knowledger: pro bono software nonprofit team
One centralised knowledge platform to aggregate and produce

With Knowledger: pro bono software nonprofit team
One centralised knowledge platform to aggregate and produce

We make this easier!

Find and access knowledge across all platforms in minutes

What you get:

- **A clean way to view and connect your knowledge into products** in minutes

- **Easy capture** for all sources of knowledge without the need to migrate platforms

- **Collaborative community – work with people on your own projects or on Knowledger itself**

How teams think about price:

Custom workflow for a team of 8: each person spends an average of 8 hours a week swapping between tabs, searching platforms, and copying and pasting

Using Knowledger:

Save up to 60 hours across your team each week...

(Or, DIY for free using our open-source integrations APIs)
